

Depth First Search or DFS

What is Depth First Search or DFS?

DFS is basically a traversal method through which we can traverse our graph data structure

Graph for applying DFS

Output : 1

Current node : 2

Output : 1 2

Current node : 4

Output : 1 2 4

Current node : 2

Output : 1 2 4

Current node : 5

Output : 1 2 4 5

Current node : 8

Output : 1 2 4 5 8

Current node : 7

Output : 1 2 4 5 8 7

Current node : 3

Output : 1 2 4 5 8 7 3

Current node : 6

Output : 1 2 4 5 8 7 3 6

Current node : 3

Output : 1 2 4 5 8 7 3 6

Current node : 7

Output : 1 2 4 5 8 7 3 6

Current node : 8

Output : 1 2 4 5 8 7 3 6

Current node : 5

Output : 1 2 4 5 8 7 3 6

Current node : 2

Output : 1 2 4 5 8 7 3 6

Current node : 1

Output : 1 2 4 5 8 7 3 6

So our final Output for
DFS is : 1 2 4 5 8 7 3 6

Let's do the code
